

CODING TEST

Angular

The Challenge

Build a news feed similar to that of the Instagram Home page feed, similar to the one here.

You may register, get the API key, and use this API.

https://hiit.ria.rocks/videos_api/cdn/com.rstream.crafts?versionCode=40&lurl=Canvas%20painting%20ideas

Guidelines

1. The feed should include an image.
2. The Title from the API needs to be shown partially with 50 characters with a 'more' button as Instagram post description has.
3. The full Title must be shown on clicking the 'more' button.
4. Try to rip exactly what Instagram has in its UI.
5. Should support while scrolling.
6. You need to show only 30 posts.
7. The Like, Comment and Share buttons need not have any functionality.
8. The comments can be loaded for each article using the following API. Call this endpoint each time under a feed element to load a comment.

<http://cookbookrecipes.in/test.p>

9. There should be a bookmark button on each post as Instagram has. The bottom bar should have an option to list bookmarked posts. The bookmarked items should be stored locally. It should stay saved even after closing and reopening the application.
10. Try to overcome the errors that can come up like cors error.

Submission

- Host your output on Heroku or Netlify or any similar platform and send it along with the code published in GitHub (the link) or as a compressed zip file to jobs@riafy.me.
- The submission is expected before or precisely at the end of your allowed time period.
Exceeding the time limit of 6 hours might result in disqualification.
- The quality of the final UI and the code will also be considered for evaluation.

Is this challenge a tough nut to crack? Let's see if you do! Good luck.
